| | | Claims |
|--|-----|---|
| χ_{ij} | | 1. An apparatus for delivering a plurality of fluids to a chemical vapor deposition |
| XIII | | chamber, having a cavity comprising: |
| | 3 (| an inlet nozzle having a first diameter to receive one of said plurality of fluids as a |
| | 4 | carrier fluid, and configured to maintain a first pressure and a first |
| | 5 | temperature; |
| | 6 | a throat region having a first and second end, connecting to said inlet nozzle at |
| | 7 | said first end, having a second diameter less than said first diameter, and |
| | 8 | configured to maintain a second pressure and second temperature; said throat |
| | 9 | region having at least one aperture adjacent to said first and second ends to |
| () .3 | 10 | allow for the introduction of at least one of said plurality of fluids to said |
| | 11 | carrier fluid; and |
| "4 1.11 | 12 | an exit nozzle, connect to said throat region at said second end, having a third |
| 10 11 | 13 | diameter greater than said second diameter, and configured to maintain a third |
| | 14 | pressure and third temperature. |
| :: :3 | | |
| .J !!! | 1 | 2. The apparatus of claim 1 wherein said inlet nozzle having said first diameter |
| G., I W., A. W., M., M., M., M., M., M., M., M., M., M | 2 | tapers down to said throat region second diameter at an angle in the range of forty to |
| | 3 | sixty degrees. |
| | | , |

- The apparatus of claim 1 wherein said throat region is configured to operate at 1 a critical Mach number of 1.0. 2
- The apparatus of claim 1 wherein said second pressure and said second 1 temperature are selected to present a condition for atomization of said fluids. 2
- The apparatus of claim 1 wherein (some of said plurality of fluids are 1 precursors, and others of said plurality of fluids are dopants. 2

- 1 6. The apparatus of claim 1 wherein said throat region further comprises two or
- 2 more apertures adjacent to said first and second ends to allow for the introduction of
- 3 two or more of said plurality of fluids to said carrier fluid, each of said two or more
- of said plura ity of fluids introduced separately through individual apertures.
- The apparatus of claim 1 wherein said throat region is configured to maintain
- 2 said first pressure to be greater than said third pressure.
- 1 8. The apparatus of claim 1 wherein said second pressure is an elevated and
- 2 constant pressure above vacuum conditions.
- 1 9. The apparatus of claim 1 wherein said carrier fluid is delivered at a constant
- 2 flow rate ensuring said second pressure being maintained constant through said throat
- 3 region.
- 1 10. The apparatus of claim 1 wherein said plurality of fluids are introduced
- 2 separately and simultaneously without pre-mixing.
- 1 11. The apparatus of claim 1 further comprising a heater for applying heat to said
- 2 plurality of fluids exiting said exit nozzle.
- 1 12. The apparatus of claim \(\) wherein said exit nozzle at said third diameter tapers
- down to said throat region second diameter at an angle in the range of twenty to forty
- 3 degrees.
- 1 13. An apparatus for delivering a plurality of fluids to a chemical vapor deposition
- 2 chamber, having a cavity comprising

| | 3 | an inlet nozzle having a first diameter to receive one of said plurality of fluids as a |
|--|----------------------------|---|
| | 4 | carrier fluid, and configured to maintain a first pressure and a first |
| | 5 | temperature; |
| | 6 | a throat region having a first and second end, connecting to said inlet nozzle at |
| | 7 | said first end, having a second diameter less than said first diameter, and |
| | 8 | configured to maintain a second pressure and second temperature; said throat |
| | 9 | region having at least one aperture adjacent to said first and second ends to |
| | 10 | allow for the introduction of at least one of said plurality of fluids to said |
| | 11 | carrier fluid; and, |
| | 12 | an exit nozzle, connect to said throat region at said second end, having said second |
| [] | 13 | diameter, and configured to maintain said second pressure and said second |
| ₩.] #.]] | 14 | temperature, such that said exit nozzle is an extension of said throat region having |
| (m) 6.01 (m) | 15 | the same dimensions as said throat region. |
| 10 | | |
| <u> </u> | 1 | 14. The apparatus of claim 13 wherein said inlet nozzle having said first diameter |
| | 2 | tapers down to said throat region second diameter at an angle in the range of forty to |
| | 3 | sixty degrees. |
| \\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\ | 01170 | The apparatus of claim 13 wherein said throat region is configured to operate |
| Alh ' | $\mathcal{Q}_{\mathbb{Z}}$ | at a critical Mach-number of 1.0. |
| | | |
| 1, | 112 | 6. The apparatus of claim 13 wherein said second pressure and said second |
| Suh . Sul | $u_{\mathcal{U}}$ | temperature are selected to present a condition for atomization of said fluids. |
| • | / | |

- The apparatus of claim 13 wherein some of said plurality of fluids are 17. 1 precursors, and others of said plurality of fluids are dopants. 2
- The apparatus of claim 13 wherein said throat region further comprises two or 18. 1 more apertures adjacent to said first and second ends to allow for the introduction of 2

6

7

8

- two or more of said plurality of fluids to said carrier fluid, each of said two or more of said plurality of fluids introduced separately through individual apertures.
- 1 19. The apparatus of claim 13 wherein said second pressure is an elevated and constant pressure above vacuum conditions.
- 1 20. The apparatus of claim 13 wherein said carrier fluid is delivered at a constant
- flow rate ensuring said second pressure being maintained constant through said throat
- 3 region.
- 1 21. The apparatus of claim 13 wherein said plurality of fluids are introduced separately and simultaneously without pre-mixing.
- 1 22. A method for introducing a plurality of fluids into a chemical vapor deposition 2 process chamber comprising:
- injecting at least one of said plurality of fluids as a carrier fluid in line at a constant flow rate and under conditions of a first pressure and first temperature;
 - injecting others of said plurality of fluids separately, simultaneously, and without pre-mixing, as precureors and dopants in line with said carrier fluid and under conditions of a second pressure and a second temperature; and,
- exiting said fluids to said chamber such that said fluids undergo atomization and vaporization.
- 1 23. The method of claim 22 further comprising exiting said fluids to said chamber 2 at a third pressure and third temperature.
